

COMPLETE YOUR SUPER YACHT SAIL SERVICE WITH C-TECH

Yachts visiting Auckland have an excellent opportunity to have their batten inventory inspected and renewed

Sail battens are not often part of general maintenance due to difficult access - especially on larger boats- and often only get attention when there is an **ISSUE**. C-tech is now offering an inspection service for vessels visiting Auckland. We are able to identify and repair wear and damage, helping extend the life of the sail and battens. If sails are being taken off for service work, batten inspection and maintenance can be included in this process.

Batten Service

The C-Tech batten service is customized to each yacht. One of our representatives will come to the boat, run through batten inventory and update the captain on available products, as well as formulate a service plan.

This is also a good chance to review the spares the boat is carrying and make any adjustments considering the freight logistics of shipping long battens worldwide.

Standard Service Options

Spectra Cover Battens

C-Tech offers the option of a spectra sock cover to protect sails in the event of batten damage and assist with removal. This covering can either be replaced or added to existing battens.

Pricing:

- CT22/33NZ\$30/m
- CT36NZ\$40/m

Spares Kit

A standard C-Tech spares kit is essential in the rare event of a breakage, and can be used to repair battens at sea or in port. Kits can be customized to suit each set of battens and include batten sock material, solid carbon plate to fit inside batten (as a joiner) and split outer sleeves to fit over outside of repair. We can also discuss the best option for carrying spare battens that are difficult to airfreight.

Pricing:

- CT33 Spares KitNZ\$729
- CT36 Spares KitNZ\$850
- CT40 Spares KitNZ\$960

PALT Sleeve Tensioners

PALT Sleeve Tensioners are a new product and are regularly used in batten services where either an extension or more adjustment is required. PALT Sleeve Tensioners are in stock and designed for CT36 and CT40 battens and can easily be retrofitted. They add up to 300mm of effective batten length plus 140mm of adjustment. They are fast becoming a standard choice for yachts over 130ft.

Hardware Upgrades

C-Tech is continually improving its hardware range, and in some cases hardware can be easily upgraded to either make sail management easier or improve performance. We can work with the captain to review hardware and ensure the yacht has the most suitable equipment.

Flexifurl battens and SnuffAir

As part of the service we are able to review and service Flexifurl battens and spinnaker Snuffers. In some cases we have reconditioned these products as well as educating crew and answering questions about usage and limits of the products. Our experience has shown both service and education has been very valuable.

Other Composite Products

C-Tech manufactures a full range of carbon fibre products including custom tube, female moulded components and foils. We can work with you on any other composite requirements.
